1. Title: Software Developer

2. Headline

I aim to solve outstanding business challenges by developing new products and services so that teams can improve performance. By collecting feedback on processes and iterating new solutions I aim to create efficient and productive workflows for others.

3. Personal Pitch:

Hello, my name is Ian Cargill and I am currently an Analyst at Zillow Group. Previous to my current role I have had a long and varied career in hospitality and small business management. In my current role I have built and deployed several software tools to assist in daily procedures for my team.

I have a diverse set of interests but I'm always motivated in streamlining operations to create more efficient and productive work flows. I enjoy the iteration and adaptation of new processes and believe user experience is equally important for both customers and coworkers.

I hope to continue to use my software development skills in creating efficient user interfaces, with relevant and helpful data interactions.

4. Excitement about Tech:

I enjoy the crossroads of user interaction and data. Making data accessible and relevant for users is a satisfying challenge that provides useful tools and insight for peers and customers.
